Develop Small Business Subscription Management System

The system aims to enable small businesses to manage and track their monthly and annual subscriptions efficiently. It includes a simple web interface that allows users to input subscription details such as name, cost, start date, and renewal date, with the ability to categorize subscriptions by type (cloud services, marketing tools, other bills). The system provides a main dashboard to display and organize all registered subscriptions, along with general statistics, including total monthly and annual costs and the number of active subscriptions.

The system supports sending email notifications to users before the subscription renewal date, with the option to upload related invoice files (PDF or images) for easy browsing and downloading. Users can also edit or delete registered subscriptions and export data to Excel or PDF files.

Technically, the system uses a front-end built with HTML, CSS, and JavaScript, using frameworks like React.js or Vue.js. The back-end processes data using Node.js with Express or Python with Flask/Django, while the data is stored in a MySQL or MongoDB database. The system ensures fast performance, with the homepage loading in under 3 seconds, and adheres to the highest security standards by protecting user data through SSL encryption and robust authentication mechanisms. The system is compatible with all modern browsers and features a clean, user-friendly design to guarantee a smooth user experience.
